

## SuntekCam App Quick Start Guide

### 1. download and install the App.

Use your mobile phone to scan below QR code, download and install the App SuntekCam

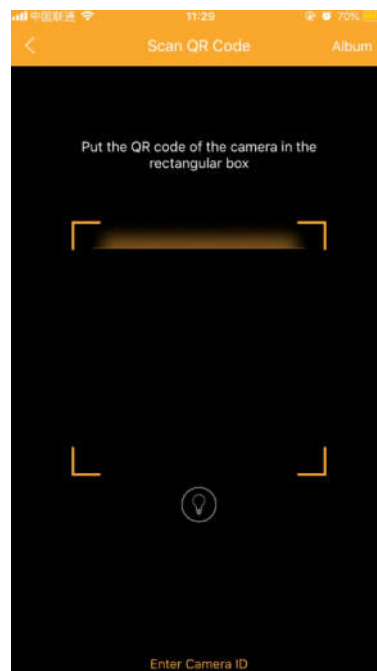

## 2. Add your camera into your App

when camera at TEST mode, press left button directly, there will be QR code (the third one), press OK, then you will find camera QR code as below screenshot.

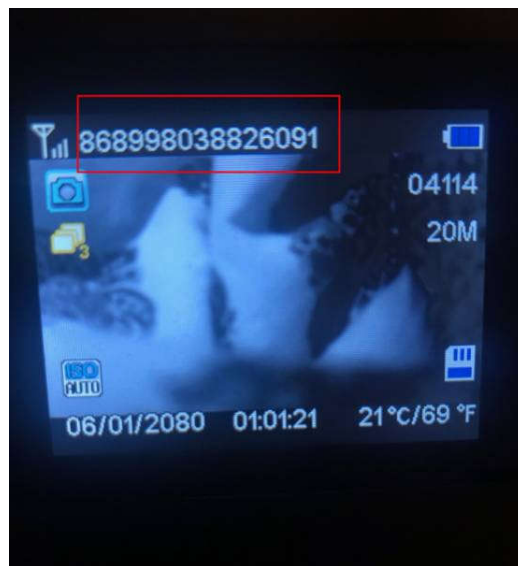

3. initiate the App, choose " + " , scan the QR code of camera and add the camera in your App

When you app shows "invalid device ID", it means your camera has not been added into App server.

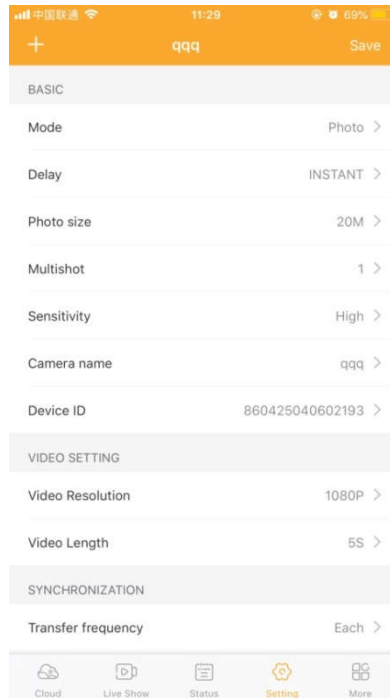

You need to send us your IMEI number, and we will add your IMEI number into App server, then you camera device ID is available, here is how to get IMEI

Move you put power switch to TEST and camera turn on, press the LEFT button directly, then there will be IMEI on the left corner of display.

4. after you add the camera, device name, you can fill in any name, device password 123456

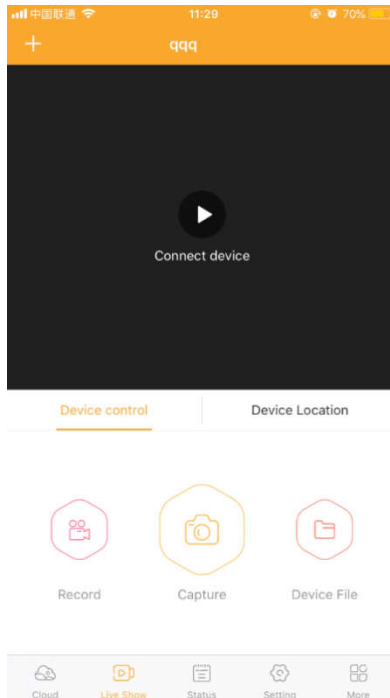

you can check the camera data and set the camera such as APN, phone number, for example: change the mode to Camera& Video, then press " save" to save the setting.

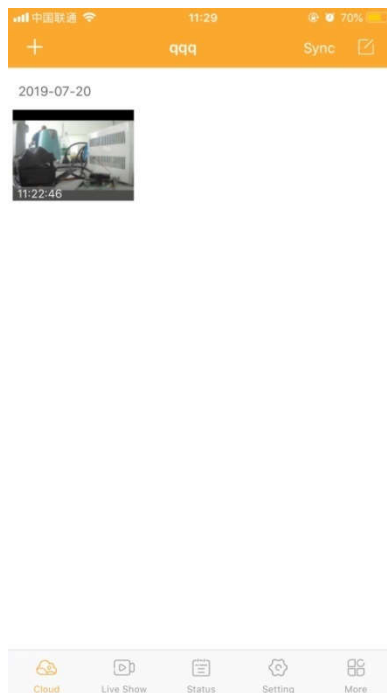

**Note: in APN setting, phone number is the SIM card number inserted into camera, not the phone number to receive the pictures.**

## 5. How to get pictures and videos ?

1). In " live show" submenu, press " capture", then camera will get a command from App and capture a picture / video.

2).In "cloud" submenu, press" Sync" , wait for 15~30 seconds, move the camera display to refresh, there will be a picture
